

## **ENVIRONMENTAL & SUSTAINABILITY POLICY**

Next Control Systems markets and installs a range of building environmental control products that have a direct impact on customers' buildings' energy consumption and carbon footprint.

We strive to minimize the impact of our own operations and we directly assist our customers in achieving their goals of improving environmental performance through conserving energy consumption.

We continue to improve our own and our customers' environmental performances by regularly reviewing our processes of management and control to:

1. Comply with the requirements of environmental legislation and approved codes of practice;
2. Consider, assess and take action where necessary to continuously improve our environmental practices;
3. Through training and appropriate documentation ensure that our employees at all levels understand both the company's and their own personal responsibility towards the environment;
4. Publish this policy to our customers, suppliers, contractors and employees;
5. Purchase our materials efficiently to reduce waste and the use of non sustainable materials;
6. Minimise pollution and vehicle emissions in every aspect of our business;
7. Encourage suppliers and contractors to adopt similar environmental standards; and
8. Adopt an 'energy efficient' conscious approach to the design and implementation of all our control systems and services.
